

ABSTRACT OF THE DISCLOSURE

A fingerboard having at least one fingerboard row for storing a plurality of threaded tubulars is provided. A plurality of latches are connected to the at least one
5 fingerboard row for lockingly retaining at least one threaded tubular, wherein each of the plurality of latches is movable between a locked position and an unlocked position. A row controller is connected to each of the latches for individually and sequentially moving the latches between the locked and
10 unlocked positions, wherein the row controller is manually operable from a location remote from the latches such that the latches are manually and remotely controlled.
